Environmental impact and Biodiversity Policy

Approved by: Chief Executive Officer

Executive party: Head of Quality

POLICY

A stable biodiversity keeps our oceans healthy, our livelihoods alive, and contributes to a stable global climate. Frøy acknowledge that all equipment we handle and the fish we are in contact with can all have impact on the environment and biodiversity in which we operate in. As a complete service provider for the aquaculture sector, Frøy has a responsibility to ensure that our activity has minimal impact on our surroundings, through minimizing pollution and the risks of escapes.

We ensure that our services are up to the standard of the most recent rules and regulations at a national and international level, through certifications such as Global G.A.P., NYTEK23, NS9415:2021 and ISO.

Through our participation in research projects such as on water treatment and its release back into the sea, Frøy aspires to contribute to better understanding of how maintaining fish welfare on ship affects the surrounding environment.

Frøy's internal procedures and standards for documentation all comply with the Norwegian Aquaculture Regulations, and the standards demanded by our customers. Biodiversity is secured through our routines of filtering and cleansing the treatment water used for medicinal delousing before release back into the ocean. Our developing treatment methods through the laboratory animal experiments are to always comply with the laws and regulations on emissions which may impact the environment.

Goal:

Frøy is to have zero escapes of fish in our care.

Frøy understands its responsibility to protect the local environment and shall report any risk inducing factors.

Frøy shall have zero accidents where oil, diesel, or other environmentally harmful substances are released to the sea.

Frøy and its employees are to recycle and deliver all our waste to appropriate waste management facilities.
